

Uploading Files

Uploading files is very much like the reverse of downloading files.

Use the FTP (file transport protocol) software of your choice.

Simply upload the files after you have edited them. If you have created subdirectories on the server for documents such as your Trestleboard, you will want to make sure that the appropriate files go into the appropriate directory. Once you have uploaded your files, go to the website and make sure it is working the way you intended!
